The publication is simple in go through preferable to fully grasp. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.

Final Experimental Procedure This chapter describes the final experimental procedure used in the formal evaluation. The basis of the dry run was a detailed evaluation plan, described in 6 , which was developed with input from researchers at Embry-Riddle Aeronautical University. Based on the results of the dry-run, the experimental procedure was modified in order to meet experimental objectives. 3. 1 Dry Run: Lessons Learned A dry run was conducted at Embry-Riddle Aeronautical University with four subjects on 15-16 April 2002. The principal lessons learned from the dry-run are the following: 1. Experiment is too lengthy. 2. Weather imagery (MOCK) is sufficient and complete. Subjects did not feel that they were missing any weather information (except PIREPs and TAFs, which were not ready in time) 3. We were unable to modify the commercial flight planner to accept pre-recorded data. 3. 1. 1 Experimental Length The original plan called for the entire experiment to last under three and half hours. One principal reason for the dry run was to assess the expected running time. The dry run had four student dispatchers run through all the training and questionnaires, and one trial in each condition. The training took, on average, about as much time as was predicted, however the trials took considerably longer than predicted.
