GRIN Verlag Apr 2015, 2015. Taschenbuch. Book Condition: Neu. 210x148x1 mm. This item is printed on demand - Print on Demand Neuware - Scientific Essay from the year 2012 in the subject Computer Science - Applied, , language: English, abstract: Application requirements for delay and low jitter has driven the development of Active Queue Management (AQM) is very fast. Random Early Detection (RED) as one of the AQM has grown so rapidly and become a reference for the development of other AQM variants. RED to be fast growing because of its simplicity and ease to modified its parameter. There have been many studies that discuss the development of RED, but very few have focused on finding  $w_q$  value, the weights for the optimal packet drop probability. In this study we tried to offer a different approach to the search  $w_q$  values using genetic algorithms. This is done to adapt the possible values  $w_q$  dynamically according to the character of traffic. 12 pp. Englisch.
